I am also out of the office today and I don't recall the formulations of the Halowax's. If I remember correctly, 2-chloronaphthalene is the most common constituent and occurs in the highest concentrations in the samples that have been collected. GLNPO refers to the NAPL as PCN's but it is actually mostly monochloronaphthalene. I think they confuse 2-chloronaphthalene with dichloronaphthalene. I believe the NAPL was sampled during the RFI.

Subject: East Plant - Halowax question

Hi Mike,

I'm working from home and don't have the RFI or DOCC documents handy. Would you know what type(s) of Halowax Koppers made at the site or were NAPL samples analyzed during the RFI? If you don't know, I'll look it up tomorrow when I'm back in the office.

Thanks.

Carolyn
